

Press Release

Vienna, 26.09.2022

Extended range of information on the AIT website

Research results and articles on the AIT Issues Climate Care, Sustainability, Solutions for Industry / Intelligent Production, Career Opportunities and Portraits of Top Researchers at a Glance

The AIT Austrian Institute of Technology updates its website <https://www.ait.ac.at> and introduces the "AIT Issues". Austria's largest non-university research institution enables website visitors to learn more about AIT research results and contributions in the areas of Climate Care, Solutions for Industry/Intelligent Production and Let's Think Sustainable at a glance. The AIT Issues are supplemented by the section Your Ingenious Partner, where AIT researchers are presented on the topics, as well as the section Career Opportunity Top Research, which is dedicated to all important information on careers at AIT.

"With the AIT Issues, we enable website visitors to quickly find out which solutions the AIT is working on for the problems of our time and which researchers are behind them - whether in the area of climate care, sustainability or solutions for industry/intelligent production," says AIT Head of Communications Michael H. Hlava.

"The AIT Issues expand our digital communication mix and are a complement to the AIT Blog introduced in 2020, which communicates research topics to a broad public in an easy-to-understand way", says project manager Daniel Pepl.

Climate Care

The AIT researchers develop carbon-neutral solutions in the areas of energy, mobility and the use of biological resources. They research measures for adaptation to climate change for industry and agriculture. Increasing energy efficiency and reducing CO2 emissions have been a central focus for many years. A unique high-tech research infrastructure enables partners from science and industry to develop and optimize new methods together with AIT.

Solutions for industry/intelligent production

Supporting domestic industry and Austria as a business location by developing and implementing new technologies and innovations is one of the core tasks of the AIT. This is done in close cooperation with partners from science and industry.

The combination of high expertise in concrete applications and technologies with cross-sectoral system competence in conjunction with a competitive European research infrastructure represents a particularly unique selling point. Thus, AIT plays in the league of the best and supports industry as an Ingenious Partner.

Your Ingenious Partner

Another focus is on researchers who are among the top in their fields. This is evident from the high impact in scientific journals and the considerable number of EU research projects acquired. In AIT's seven centers, they tackle a wide range of relevant problems and develop concrete solutions. Currently, the AIT Group has a staff of around 1,400 people, who come from more than 40 countries. They form the basis for AIT's success and are essential Ingenious Partners for our customers in industry.

Let's think sustainable

The thematic focus and basic idea of "Let's think sustainable" is reflected throughout the company. On the one hand, the core business of the AIT, research, is consistently oriented towards sustainability: Many of the research projects that AIT conducts together with partners in Austria, Europe and beyond, run along the themes of the European Green Deal and the EU missions - from adaptation to climate change to climate-neutral cities and the protection of natural resources. On the other hand, sustainability is a firmly integrated component in all areas of the company, such as human resources management, gender & diversity programs and compliance, which ensures adherence to important standards and rules.

Career opportunity in cutting-edge research

This section is dedicated to all important information about careers at the Austrian Institute of Technology. The AIT is Austria's largest research and technology organization and plays in the top league worldwide in many infrastructure topics, which opens up great opportunities for young researchers. Clear career models and paths provide excellent career opportunities for AIT employees. Among others, initiatives such as the PhD program or the Startup and Entrepreneurship program are present at AIT, offering talents the best conditions and stimulating supervision. This makes the institute a powerful development partner for industry and a top employer in the international science scene.
